At present, Tuya can provide two kinds of product development solutions: SoC and MCU development. SoC solutioon can be divided into SoC development-free solution and SoC custom firmware solution. You can choose according to your needs.

If you are developing switches, sockets, and lights, we recommend docking through the SoC Free Development Program.

If you are developing a large and small appliance, you can develop the product intelligently through the MCU docking mode.

For example, let's choose custom product development, click "Create Now" to start creating products.
